

# CONCEPTS

## Design Brief

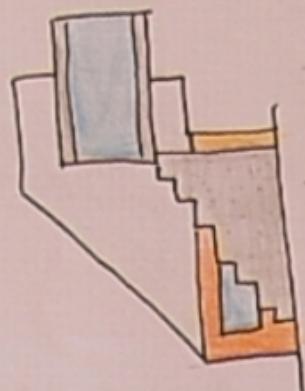

I'm going to design a surf life saving station for a fizzy beach.

## Stakeholders

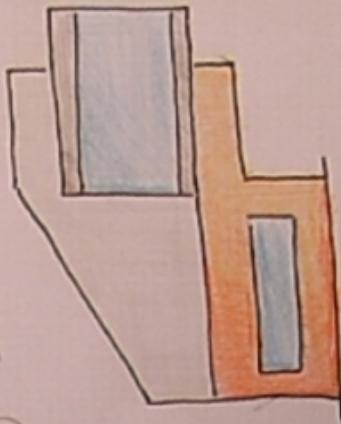

My stakeholder is my Body Boarder. She use to live a Hamlet. She use to live a Hamlet.

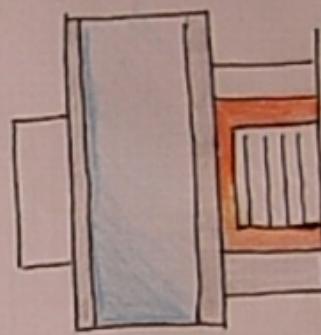

The colour I decided to go with for this concept is a bright orange. This is because in my specification it said that it had to be recognizable as a surf life savings station. I also think the bright orange make it really stand out.

I added stairs to my design for easy access in and out of my surf life saving's station.

I made my design have windows on the side for better views up and down the beach.

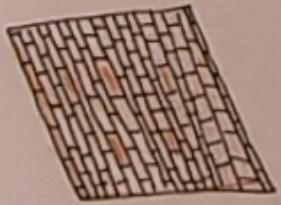

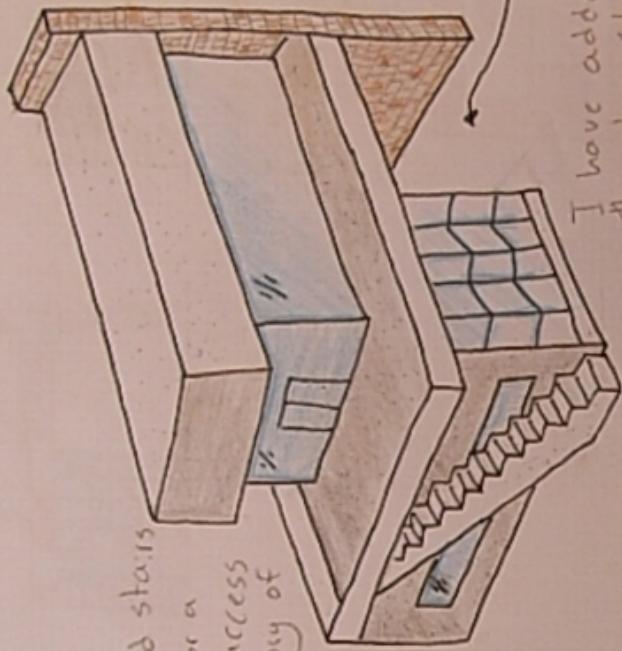

I made my design two stories. Because in my specifications it said that my design needed clear views up and down the beach. Also it said it had to be two stories high.

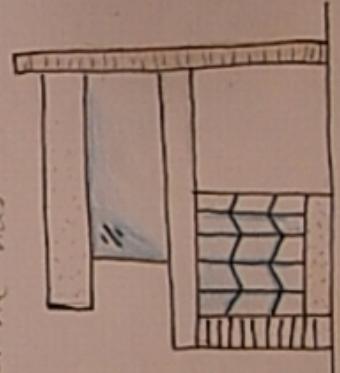

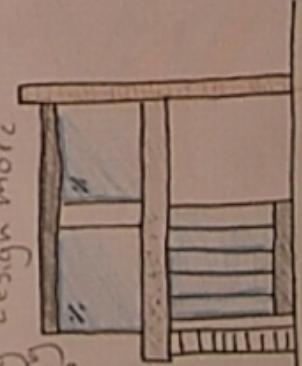

In the specifications it said that my design must hold a RIB so I added a garage to house a RIB.

## CONCEPTS

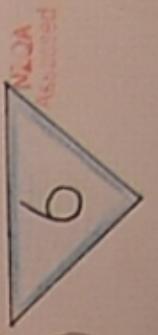

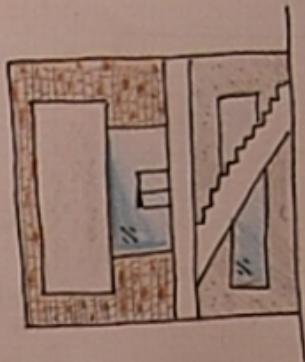

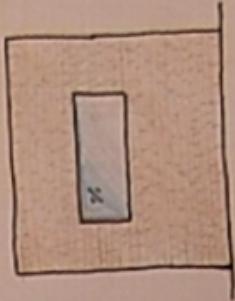

I have added stairs to my design for a fast and easy access to the top story of my building.

In this design I added a brick texture wall. Because in my research I came across a Architect named Frank Lloyd. In one of frank lloyd's buildings named The falling water he has a brick texture wall in it. So I thought it might make my design more visually interesting if I added it.

I have added space under the top story of my building to hold an RIB.

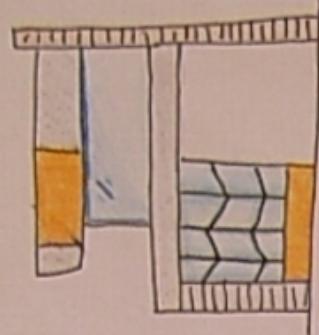

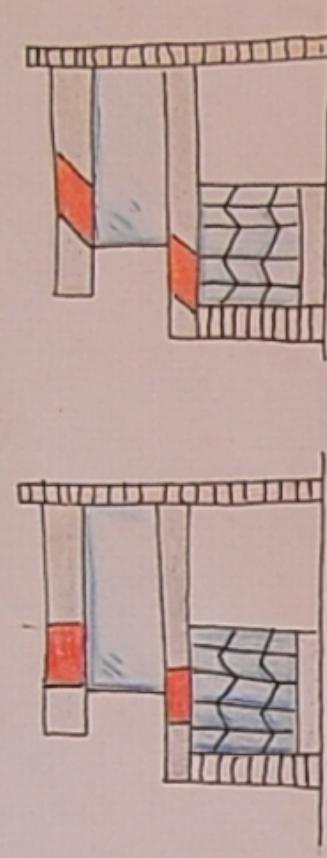

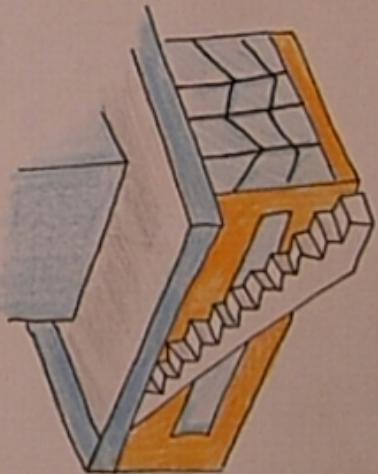

Specifications said that the building needs to be two stories high for better views up and down the beach. I made my design two stories high. I also made a cut out in the bricks for a window for better views up and down the beach.

## DEVELOPMENT

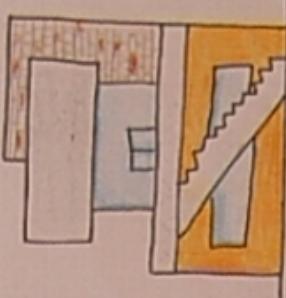

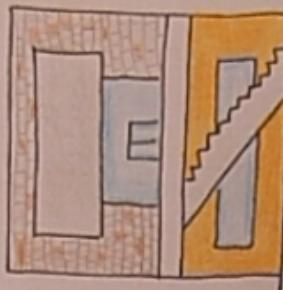

### Stakeholders feed back

- The design needs to be more colourful!!

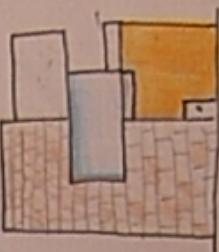

- You could see what it would look like if you only had half the brick wall!!
- You could add glass for the safety fences around the house like in your second concept

I have decided to go with the orange colour because it is much brighter and will make my design be easier to be recognised as a surf life savings station.

I actually really like only having half the brick wall. It gives it more off a modern feel which im going for.

## **Level 1 Design and Visual Communication**

**91064: Produce instrumental, multi-view orthographic drawings that communicate technical features of design ideas**

### **Exemplar for Achievement**

This submission communicates three correctly aligned views of a building. Conventions, such as the labelling of views and the use of projection lines have been used. Further use of conventions could strengthen the submission, such as the use of reference line, labelling all views and a correctly completed the title block.

The absence of an indicated scale, verified by dimensions precluded this submission rising to merit.

*NOTE: This submission was photographed, to better communicate the quality of the drawing. This has resulted in some distortion, which was not evident in the original.*
