## **Level 1 Design and Visual Communication**

### **91065: Produce instrumental paraline drawings to communicate design ideas**

#### **Exemplar for Excellence**

This submission clearly communicates complex construction details through appropriate choice of line weight and selection of viewpoint.

Multiple viewpoints and cut-away views clearly show the relationship of building components.

While rendering assists in the communication of form, it does many drawing construction details.

*NOTE: This submission was photographed. This has resulted in some distortion, which was not evident in the original.*
